

# Air 8

## 500W SMART CHARGER

# Instruction Manual

ISDT®

Thanks for purchasing the ISDT Air8 Smart Charger.

Please visit: [www.isdt.co](http://www.isdt.co) for more details on the functions of this smart charger, as well as purchase various accessories.

Functions of products will be kept on upgrading, the manual in your hand may be different from the actual operation, please refer to the actual functions.

### Warnings and Safety Tips

For your safety and a better user experience, please read this manual and follow the instruction before using the new charger.

- Never use the charger without supervision, please stop using the charger and refer to the manual for reasons if any functional abnormality.
- Keep the charger away from dust, humidity, rain and high temperature, as well as avoid direct exposure to the sunlight and intense vibration.
- Place the charger on a heat-resisting, non-flammable and insulating surface. Do not use it on the car's seats, carpet or other similar places. Keep inflammable and explosive objects away from operation areas of the charger.
- Read the instruction manual carefully to be familiar with the features of the charger, and set proper charging parameters before operating. Setting the parameters incorrectly will result in damage to the product, personal property and cause serious injury as well.

### Port / Buttons

Dimension: 80×80×33mm Weight: 170g

### Product Specifications

Max. input current: 20A  
 Input voltage: DC 10~34V  
 Output voltage: DC 1~35V  
 Balance current: 1.5A/Cell Max  
 Abnormal voltage alarm: Support  
 Supported battery types and cell count:  
 LiFe, LiIon, LiPo, LiHv, ULIHv 1~8S ; Pb 1~12S ; NiMH/Cd 1~16S

Charging current: 0.1~20A  
 Discharging current: 0.1~1.5A  
 Max. charging power: 500W  
 Max. discharging power: 15W

### Preset Battery Type of Charger and Task Parameters

	NiCd/MH	Pb	LiFe	LiIon	LiPo	LiHv	ULiHv
Rated voltage	1.20V	2.00V	3.20V	3.60V	3.70V	3.80V	3.90V
Full charge voltage	1.40V	2.40V	3.65V	4.10V	4.20V	4.35V	4.45V
Storage voltage	×	×	3.30V	3.70V	3.80V	3.85V	3.95V
Discharge voltage	0.90V	1.90V	2.90V	3.20V	3.30V	3.40V	3.50V
Balance charge	×	×	✓	✓	✓	✓	✓
Unbalanced charge	✓	✓	✓	✓	✓	✓	✓
Supported cell count	1~16S	1~12S	1~8S	1~8S	1~8S	1~8S	1~8S
Max. charging current	20A	20A	20A	20A	20A	20A	20A

### How to Confirm Charging Current

Make sure to know the maximum charging current of the battery before charging, never use excessive current to charge to damage your battery, which will result in over heat even explosion during the charging process. The charging and discharging capacity of battery is usually marked with C value. Multiplying the charging C value and battery capacity equals to the maximum charging current supported by the battery. For example, for a 1000mAh battery with a charging capacity of 5C, the maximum charging current would be 1000×5=5000mA; therefore, the maximum charging current is 5A. For a lithium battery, if it is impossible to confirm the supported charging C value, please set the charging current below 1C, for the sake of its (lithium battery) safety. The reference relation between C value and charging time: charging time ≥60 minutes/ charging C value (e.g. it needs around 60~70 minutes to complete charging with 1C). Due to differences in battery conversion efficiency, the time to complete the charging might be extended.

### Operating the Charger

Power on Q8 smart charger, connect the battery, and short touch the middle key of the touch board to enter the task setting menu as follows:

### Charge

Balancing port is strongly recommended when charging lipo battery, which can make sure to monitor voltage on each cell battery and balance it when charging. Warning beeper will yell before start charging lipo if in non-balance mode(no connecting with balance port). Current setting range: 0.1~20A. The battery type, cell count and charging current are auto set accordingly when connecting with BattAir battery.

### Discharge

Current setting range: 0.1~1.5A. The battery type, cell count and discharging current are auto set accordingly when connecting with BattAir battery.

### Storage

Current setting range: 0.1~20A. The battery type, cell count and storage current are auto set accordingly when connecting with BattAir battery.

### DC Power supply

The charger can be used as a DC power supply when choosing this function, with adjustable voltage 2~30V, and current 0.5~10A. The battery type, parameter and current are not optional in this task.

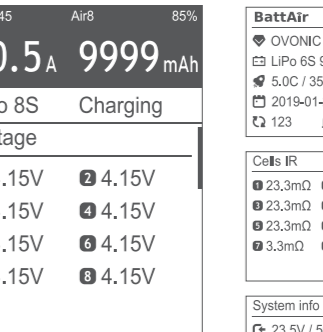

### Destroy

Connect the battery to be scrapped, and select the scrap function in task options, which capable to discharge the battery to 0V. Current setting range: 0.1~1.5A. The battery type and cell count are auto set accordingly when connecting with BattAir battery.

Task	Charge/Discharge/Storage/DC power supply/Destroy
Battery	LiHv, LiPo, LiIon, LiFe, Pb, NiMH/Cd, ULIHv
Battery and cell count	LiFe, LiIon, LiPo, LiHv, ULIHv (1~8S), Pb (1~12S), NiMH/Cd (1~16S)
Current	0.1~20A

### Charging Screen

Touching the touch board to shift the charging information, as cell voltage, cell internal resistance, working parameter, BattAir information. The cell voltage and internal resistance only on display in balancing charging mode. The BattAir information will display only when connected to the BattAir battery, and the cell voltage is able to display without connected to the balance port.

Cell voltage

### System Setting Menu

Under the standby interface, long touch the touch board to enter the system setting menu:

**Min. input voltage protection 10~30V:** all tasks in operation will be stopped at once and hint warning of low voltage, when the input voltage is lower than the input voltage as set up. It will protect the battery from being discharged when using battery pack as power supply.

**Max. input power setting 30~550W:** if the input power is smaller than the max working power(550W), please set up the parameter as the actual output power as max input, to protect the input power and enable the charger to work stable.

**Buzzer volume:** The operation sound will be shielded when the volume is off, except the warning error beep.

**Self-test:** Enter system setting. select self-test task

**Calibration:** the input voltage, output voltage and balance voltage of the charger can be calibrated with this task.

**NEVER USE CHARGER UNSUPERVISED**

- Never attempt to charge primary (non-rechargeable) batteries.
- Batteries pose a severe risk of fire if not properly handled.
- Read entire operation manual before using charger.
- This unit may emit heat during use.
- Only operate this device in a cool ventilated area away from flammable objects.
- Failure to observe safety procedures may cause damages to property or injury.
