

Model	Lollipop 5.8G SMA RHCP 160mm
SKU	4236
Category	VTX Antennas
General	
Frequency	5.6-6GHz
Gain	1.99dBi (AVE)
Polarization	RHCP
Connector Type	SMA
Length	163 mm
Features	
<p>Optimized for FPV racing drones.</p> <p>Maximum signal coverage. 5.6-6GHz bandwidth covers all of raceband and all channels have nearly uniform transmission strength.</p> <p>Perfect circular polarization axis ratio. Effectively suppress screen flicker caused by multi-path interference.</p> <p>Small and sturdy. Optimized design obtained through massive impact tests. The flexible tube can withstand angle bends and crash impacts to avoid cable damage.</p> <p>Between 5650 and 5950MHz, VSWR is below 1.2 meaning transmission efficiency is up to 98%. This can also help reduce VTX heat.</p> <p>Quick installation. Antenna clips are designed to be the same size as standard flange SMA sockets. The length of the antenna tube can be cut to meet your needs.</p> <p>Quality assurance. Pilotix antennas are tuned for performance by the Professional Microwave Laboratory and each antenna is qualified by a network analyzer before leaving the factory.</p>
